Using **AngularJS** (or another JavaScript framework or library), create a dialog that allows users to select a Team and an Employee. The list of Employees depends on which Team the user has selected.
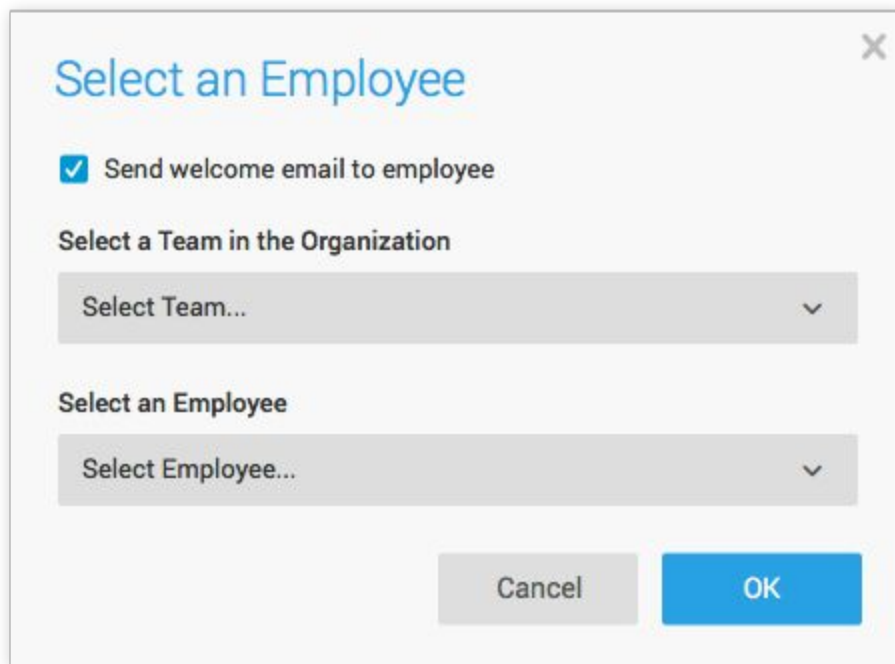

The checkbox on the form is a standard HTML checkbox and has no additional functionality.

The Team and Employee input elements should provide auto-complete so that users can type the first letters and be shown suggestions. Example: If the Finance team is chosen in the Team field, and "Ca" is entered in the Employee field, three names should be suggested to the user: Caleb Brown, Carol Smithson and Carl Sorensen.

Use the following data to drive the dialog:

```
[
    { team: 'Engineering', employees: ['Lawana Fan', 'Larry Rainer', 'Rahul Malik, 'Leah
Shumway'] },
    { team: 'Executive', employees: ['Rohan Gupta', 'Ronda Dean', 'Robby Maharaj']},
    { team: 'Finance', employees: ['Caleb Brown', 'Carol Smithson', 'Carl Sorensen']},
    { team: 'Sales', employees: ['Ankit Jain', 'Anjali Maulingkar']}
]
```

This is a mockup of the dialog. Use Arial as the font and make your dialog look similar to the mockup.

Below is an example on how the Employee suggestion display looks.

When User Starts Typing
Menu dynamically filters options to match the search

Ca

Caleb Brown

Carol Smithson

Carl Sorensen
